

## Services - Exterior House Painters

\*Our Painting service for you:

- Evaluate Existing Conditions: Looking at the entire surface of your house looking for problems, like peeling paint, open joints and seams, wet or rotted wood, mildew, and other problems.
- Sand and remove all peeling and flaking paint.
- Light Sand: Glossy surfaces, we lightly sand them to improve the adhesion between the new and old paint.
- Prime All Bare Wood: Paint will not bond properly to exposed wood. We apply an exterior acrylic primer or oil-based primer to all bare wood.
- Patch Damaged Wood: We use an exterior filler or, for larger damaged areas and high traffic areas, a two-part polyester resin filler to repair any holes.
- Gapping: Between joints or between dissimilar materials. This is to stop water seeping into cracks and soaking into the wood. We gap all the joints, and under all the weatherboards insuring a lasting paint job.
- All fixtures are removed or properly protected
- Full cleanup after every working day.
